An exciting and enthralling evening with music, flowers for the ladies, and exhibits celebrating International Chemistry and Chemical Technology and the critical rôle played by The Chemists' Club. The International Year of Chemistry Declaration listed two historic events supporting celebration; one well known and the other obscure. We toast both: (1) the Centenary of the Nobel Prize in Chemistry for Maria Skłodowska-Curie and (2) the foundation of the short-lived International Associations of Chemical Societies in Paris by Wilhelm Ostwald only weeks after The Chemists' Club new Club House opened, financed by Ostwald's former student and Club Charter Member, Morris Loeb, and inspired, in part by Ostwald's vision of the critical need of International Collaboration: die Brücke.
